(54) Title: METHOD AND DEVICE FOR DETACHABLY FIXATING AN OBJECT

(57) Abstract: A device for detachably fixating a first object (2), e.g. a foldable car seat in folded position, to a second object (3), e.g. a vehicle, the device comprising an elastic cord (4), characterised in that the elastic cord (4) is connected, at at least one position, to a fastening means (6,7) by means of at least one pin (5), which pin (5) at least partially pierces the elastic cord (4) and preferably has a diameter of at most several millimetres. The invention further provides a method for the manufacture of a device for detachably fixating a first object (2), e.g. a foldable car seat in folded position, to a second object (3), e.g. a vehicle, the device comprising an elastic cord (4), characterised in that the elastic cord (4) is connected, at at least one position, to a fastening means (6,7) by at least partially piercing the elastic cord (4) with at least one pin (5), the pin (5) preferably having a diameter of at most several millimetres.
